

Patent-Related Tools and Methodology for Use in Research and Development Related Applications

Abstract

5 The present invention is related to patent-related tools, and methodologies
involving those tools, for assisting in all stages of research and development
(R&D) projects. IPAM server may be used in conjunction with the tools and
methodology to aid in R&D projects. The IPAM server can also be used as a
support tool for independent inventors. These tools or methods include, but are
10 not limited to, a topographic map, a top company table, a top inventor table, a
inventors by company table, a features grouping, a technology classification, a
Standard Industrial Codes (SIC) classification, a patent count per year chart, a
patent count per year chart, an application count per year chart, a technology by
company map, a patent citation tree, a nested patent citation tree, a
15 product/patent/revenue table, a patent/months to issue chart, and a
document/annotation chart.
